

Domain Analysis : Global Superstore Sales

Business Domain

The data set represents an International retail/ E-commerce business selling products to customers across different countries and regions.

The business has to make decisions around:

- What product to sell
- Which customers to target
- Which region are performing well
- How much discount to offer
- Which shipping methods to use
- How to increase sales
- How to improve profitability

Main Business Entities

1. Orders

An order represents a customer's purchase.

Important fields:

- Order.ID
- Order.Date
- Order.Priority
- Ship.Date
- Ship.Mode

2. Customers

- Top Product by Profit

Key Business Problems

Organize the project around business problems.

Problem 1 – Sales Performance

How are sales performing over time?

We will investigate:

- Yearly sales
- Monthly sales
- Category trends
- Regional trends

Problem 2 – Profitability

Which products, categories and regions are actually profitable?

We'll investigate:

- Profit by category
- Profit by sub-category
- Profit by region
- Loss-making products

Problem 3 – Discount Impact

Are discounts helping the business or hurting profitability?

We will compare:

Discount → Sales → Profit

This could produce a strong business insight.

Problem 4 – Customer Performance

Who are the company's most valuable customers?

We'll analyze:

- Customer sales
- Customer profit
- Customer segment
- Top customers

Problem 5 – Regional Performance

Which markets and regions should the company focus on?

We'll compare:

Sales + Profit + Orders

Problem 6 – Shipping Performance

How does shipping mode relate to sales, cost and profitability?

We'll examine:

- Shipping mode
- Shipping cost
- Sales
- Profit
- Order volume

Analytical Framework
